## SUMMARY

Product Designer (UI/UX) specializing in Arabic-first (RTL) mobile and web products. Works AI-native, using Claude Code, Figma MCP and AI agents from research to design-to-code. Built an agentic design system and used it to ship Elayadah, a live clinic management SaaS, end to end.

## WORK EXPERIENCE

**Product Designer** *Sep 2026 – Present*

*Elayadah | Clinic Management SaaS*

- Designed a live Arabic-first (RTL) SaaS running in multiple clinics, spanning a staff mobile app, a patient booking web app and doctor profile pages across 130+ screens.
- Patients had to travel to the clinic just to book, then often found slots gone: mapped the paper workflow with the doctor and designed online, phone and walk-in booking on live slot availability, with a six-state booking model and emergency priority.
- Built the product on an agentic design system, working with developers by handing off coded front-end prototypes via Claude Code and Figma MCP instead of static files.

## PROJECTS

**Agentic Design System** *2026*

*Solo Project*

- Built a reusable design system that AI agents can read and apply, using design tokens as the single source of truth, Figma variables, components and an icon library, with Code Connect linking each component to its code.
- Wrote machine-readable documentation and usage rules so agents generate on-system screens, flag design drift and keep design and code in sync.
- Turned it into a repeatable workflow from Figma to production-ready front-end via Claude Code and Figma MCP, used to ship Elayadah and other products faster.

## ACADEMY PROJECTS — CRADIS ACADEMY

**Syarah — Car Buying UX Case Study** *Oct 2025*

*Team Project*

- Collaborated with a team to run 20+ user interviews and turn insights into user flows, information architecture and wireframes that build trust in online car buying; several proposed solutions were later reflected in the live Syarah app.

**Momentum Design System** *Jan 2026*

*Team Project + Solo Documentation*

- Co-designed a design system for a stock trading app with tokens, variables, components and dark mode, then solo-built its live documentation site with search and detailed component pages: moumentum-design-system.netlify.app

## SKILLS

**Product & UX:** User Research, User Interviews, Product Discovery, User Flows, Information Architecture, Usability Testing, Competitive Analysis

**UI & Design Systems:** Mobile & Web UI, RTL & Bilingual Design, Prototyping, Design Tokens, Design Documentation, Developer Handoff

**AI-Native Design:** Agentic Design Systems, AI Agents, Design-to-Code, Prompt Engineering

**Tools:** Figma, Figma MCP, Code Connect, Claude Code, Claude Design, Mobbin

## TRAINING & CERTIFICATIONS

**Cradis Academy — 215+ hours of hands-on training** *Aug 2025 – Aug 2026*

- UI Design Program (72+ hours) *May 2026 – Aug 2026*
- Design Systems & Design Tokens (34+ hours) *Dec 2025 – Jan 2026*
- UX Design Program (110+ hours) *Aug 2025 – Oct 2025*

Business Intelligence & AI Workshop Program — MCIT in partnership with MBS (20+ hours) *2026*

Introduction to Claude Cowork — Anthropic *Apr 2026*

Using AI in the UX Design Process — LinkedIn Learning *Feb 2026*

## EDUCATION

**Bachelor of Laws (LL.B.)** — English Section, Faculty of Law, Mansoura University

## LANGUAGES & PERSONAL DETAILS

**Languages:** Arabic (Native) | English (Professional Working Proficiency)

**Nationality:** Egyptian | **Military Status:** Completed
